# **Linear Algebra**

#### **Question 1**

Let two matrices be

$$A = \begin{bmatrix} 1 & -1 \\ -2 & 1 \end{bmatrix}$$
,  $B = \begin{bmatrix} 0 & 3 \\ 5 & 8 \end{bmatrix}$ 

What is A + B?

- $\boxed{\begin{array}{c|c} \boxed{1} & -1 \\ 3 & 9 \end{array}}$
- $\begin{bmatrix}
  1 & -1 \\
  7 & 9
  \end{bmatrix}$
- $\begin{bmatrix}
  1 & 7 \\
  7 & 9
  \end{bmatrix}$
- $\begin{bmatrix}
  1 & -7 \\
  -7 & -7
  \end{bmatrix}$

To add two matrices, add them element-wise.

## **Question 2**

Let 
$$x = \begin{bmatrix} 8 \\ 2 \\ 5 \\ 1 \end{bmatrix}$$

What is 2 \* x?

- $\begin{bmatrix} 4 \\ 1 \\ \frac{5}{2} \\ \frac{1}{2} \end{bmatrix}$
- $\begin{array}{|c|c|}
  \hline
   & 16 \\
   & 4 \\
   & 10 \\
   & 2 \\
  \end{array}$
- $\square$  [16 4 10 2]

To multiply the vector x by 2, take each element of x and multiply that element by 2.

#### **Question 3**

Let u be a 3-dimensional vector, where specifically

$$u = \begin{bmatrix} 2 \\ 1 \\ 8 \end{bmatrix}$$

What is  $u^T$ ?

- $\square$  [8 1 2]
- $\begin{bmatrix} 2 \\ 1 \\ 8 \end{bmatrix}$
- $\begin{bmatrix} 8 \\ 1 \\ 2 \end{bmatrix}$

# **Question 4**

Let u and v be 3-dimensional vectors, where specifically

$$u = \left[egin{array}{c} 4 \ -4 \ -3 \end{array}
ight]$$

and

$$u = egin{bmatrix} 4 \ 2 \ 4 \end{bmatrix}$$

What is  $u^T v$ ?

(Hine:  $\boldsymbol{u}^T$  is a

 $1\times3$  dimensional matrix, and v can also seen as a  $3\times1$ 

matrix. The answer you want can be obtained by taking

the matrix product of  $\boldsymbol{u}^T$  and  $\boldsymbol{v}$ .) Do not add brackets to your answer.

-4

## **Question 5**

Let A and B be  $3\times 3$  (square) matrices. Which of the following must necessarily hold true? Check all that apply.

lacksquare If B is the 3 imes 3 identity matrix, then A\*B=B\*A

Even though matrix multiplication is not commutative in general  $(A*B \neq B*A)$  for general matrices A, B, for the special case where B = I, we have A\*B = A\*I = A, and also B\*A = I\*A = A. So A\*B = B\*A.

ightharpoonup If <math>C = B\*A, then C is a 3 imes 3 matrix.

Since A and B are both  $3\times 3$  matrices, their product is  $3\times 3$ . More generally, if A were an  $m\times n$  matrix, and B a  $n\times o$  matrix, then C would be  $m\times o$ . (In our example, m=n=o=3.)
